

DATA ANALYSIS LABORATORY

- Provide state-of-the-art equipment, personnel, and techniques for extracting information from imagery and electronic data
- Principal equipment
 - Computer terminal to PURDUE LARS 360-67 computer and LARSYSS classification software for training
 - Additive color viewers and density slicing equipment
 - Image analyzer, analog encoder, and video disc system for screening and analysis
 - Interactive multispectral classification and analysis system
 - Analog multispectral image analysis system
 - Batch mode multispectral classification and pattern recognition system
